

Commissioners,

I can't believe that this is the last day to file comments! The NTIA study, just Phase 1 at over 250 pages, was just released. There was no way I could study it and intelligently respond.

I read your dockets on BPL and am just overwhelmed that you are asking these kinds of questions this early.

I have lots of noise in my neighborhood already that I can't get the power company to eliminate. What's the chance that they will eliminate new noise from BPL?

If you go to the URL [WWW.W4OVH.net](http://WWW.W4OVH.net) and click on BPL Clearinghouse, you will what BPL does in the real world. And this is just one example of many. Why not go to some of the people that are hearing the noise and talk to them?

Why not put all this on hold until you can work with some people that listen to the involved frequencies and get a handle on what's really going on?
